Abstract of JP5313055

PURPOSE: To drive movable lenses smoothly into focus positions. **CONSTITUTION:** A lens driving control device is provided with lens groups 1b, 1d movable in the optical axis direction, position detecting means 7, 8 for detecting the optically moving direction of the lens groups 1b, 1d, lens driving means 3a, 3b for driving the lens groups in the optical axis direction, and a lens control means (CPU) 11 for changing the current value to be applied to the coils 4a, 4b of the lens driving means 3a, 3b according to the moving direction of the lens groups 1b, 1d so as to control the thrust of the lens driving means 3a, 3b.
